DISPLACE-M

DIarization of SPeaker and LAnguage understanding in Conversational Environments

नमस्ते, हां बताओ क्या दिक्कत है। खून टेस्ट करवाया आपने?

मेरे, कमर में दिक्कत है। हां करवाया, नौ ग्राम है।

अच्छा, तो खून भी कम नहीं है तो आयरन, कैल्शियम कि गोली नहीं खाई आपने ?

नहीं, मैने तो कोई पता नहीं करा इस चीज का

DIarization of SPeaker and LAnguage Understanding in Conversational Environments [DISPLACE]

Track 1 : SD	S1	S2	S1	S2
Track 2 : ASR	नमस्ते, हां बताओ क्या दिक्कत है। खून टेस्ट करवाया आपने?	मेरे, कमर में देख कर है। हां करवाया, नौ ग्राम है।	अच्छा, तो खून भी कम नहीं है तो आयरन, कैल्शियम कि थोड़ी नहीं खाई आपने	नहीं, मैने तो कभी पता नहीं करा इस चीज का
Track 3 : TI	General Women's Health & Gynecological Issues			
Track 4 : DS	मरीज ने कमर दर्द की समस्या बताई। आशा वर्कर ने उसे आयरन और कैल्शियम की गोलियाँ लेने, टेस्ट करवाने, और दर्द में सेंक लगाने की सलाह दी।			

SD: Speaker Diarization; ASR: Automatic Speech Recognition; TI: Topic Identification; DS: Dialogue Summarization

Terms and Conditions

1. **Track-1: Speaker Diarization in multilingual scenarios.**
   - The goal is to perform speaker diarization (who spoke when) in multi-lingual conversational audio data, recorded in far-field settings.
   - You will be provided with a dev audio dataset, and a baseline system to enable design of your own models.
   - Subsequently, a blind evaluation dataset will be provided.
   - You will submit your model predictions (in rttm format) on the blind set and the validation lists to a leaderboard interface (setup in Codalab). The leaderboard features the performance of all teams on the same dataset.
   - The performance metric for evaluation will be Diarization Error Rate (DER).
   - The participating teams are encouraged to use any open datasets for training and developing the diarization systems.

2. **Track-2: Automatic Speech Recognition in multi-dialectal settings.**
   - The goal is to perform automatic speech recognition on goal oriented, multi-dialect conversational audio data.

   - You will be provided with a dev audio dataset, and a baseline system to enable the design of your own models.

   - Subsequently, a blind evaluation dataset will be provided to all participants. You will need to submit your model predictions (in text format) on the blind set to a leaderboard interface (setup in Codalab). The leaderboard will be featuring the performance of other teams on the same dataset.

   - The performance metric for evaluation will be the Word Error Rate (WER).

   - The participating teams are encouraged to use any open datasets for training and developing the ASR systems.

3. **Track-3: Topic identification.**
   - The goal is to perform topic identification in the English on multi-dialect, goal-oriented conversational audio data

   - You will be provided with a dev audio dataset, and a baseline system to enable the design of your own models.

   - Subsequently, a blind evaluation dataset will be provided to all participants. You will need to submit your model predictions (in text format) on the blind set to a leaderboard interface (setup in Codalab). The leaderboard will be featuring the performance of other teams on the same dataset.

   - The performance metric for evaluation will be the Accuracy, Precision, Recall, F1-score.

   - The participating teams are encouraged to use any open datasets for training and developing the Topic Identification systems.

4. **Track-4: Text Summarization**
   - The goal is to perform text summarization in the native language on multi-dialect, goal-oriented conversational audio data

   - You will be provided with a dev audio dataset, and a baseline system to enable the design of your own models.

   - Subsequently, a blind evaluation dataset will be provided to all participants. You will need to submit your model predictions (in text format) on the blind set to a leaderboard interface (setup in Codalab). The leaderboard will be featuring the performance of other teams on the same dataset.

- The performance metric for evaluation will be the BLUERT, METEOR, BERTScore.

- The participating teams are encouraged to use any open datasets for training and developing the Topic Summarization systems.

5. The designed system should be automatic, without any manual intervention.

6. All participants will be required to submit a system description report (2-4 pages) to the organizers. Template will be shared shortly.

7. Participants can choose to work on any or all the tracks, and are encouraged to submit their findings as a paper to the DISPLACE-M challenge at Interspeech 2026. These papers will go through the peer-review process of Interspeech 2026.

8. The team must mention sources of any other data used in the system reports for Track 1, Track 2, Track 3 and Track 4 (and also in the submitted Interspeech paper).

9. Any future use of data in research and development must give a proper reference to this DISPLACE dataset.

10. The data is provided as described in the Displace dataset description document under the terms of the MIT license . As a best practice, we encourage you to include the same license file in your developed software. **Any form of redistribution of data in Track-1, Track-2, Track-3, and Track 4 will require consent from the organizers**.

11. The organizers are not liable for any derivatives obtained from this data.

12. The organizers reserve the right to cancel the team's participation if any violation is brought to notice.

13. The team identity will be coded as anonymous by the organizers in any future publications summarizing the findings of the challenge.

I have read all the above instructions, and I agree (on behalf of my team) to adhere to them during the course of participation in the DISPLACE-M challenge at Interspeech 2026.
